

GLP-1 and GIP

GLP-1 and GIP

“Small Signals. Big Impact on Metabolism”

INTRODUCTION

- ❑ Glucagon-like peptide-1 (GLP-1) agonists are a class of medications utilized to treat type 2 diabetes mellitus (T2DM), Obesity and Others

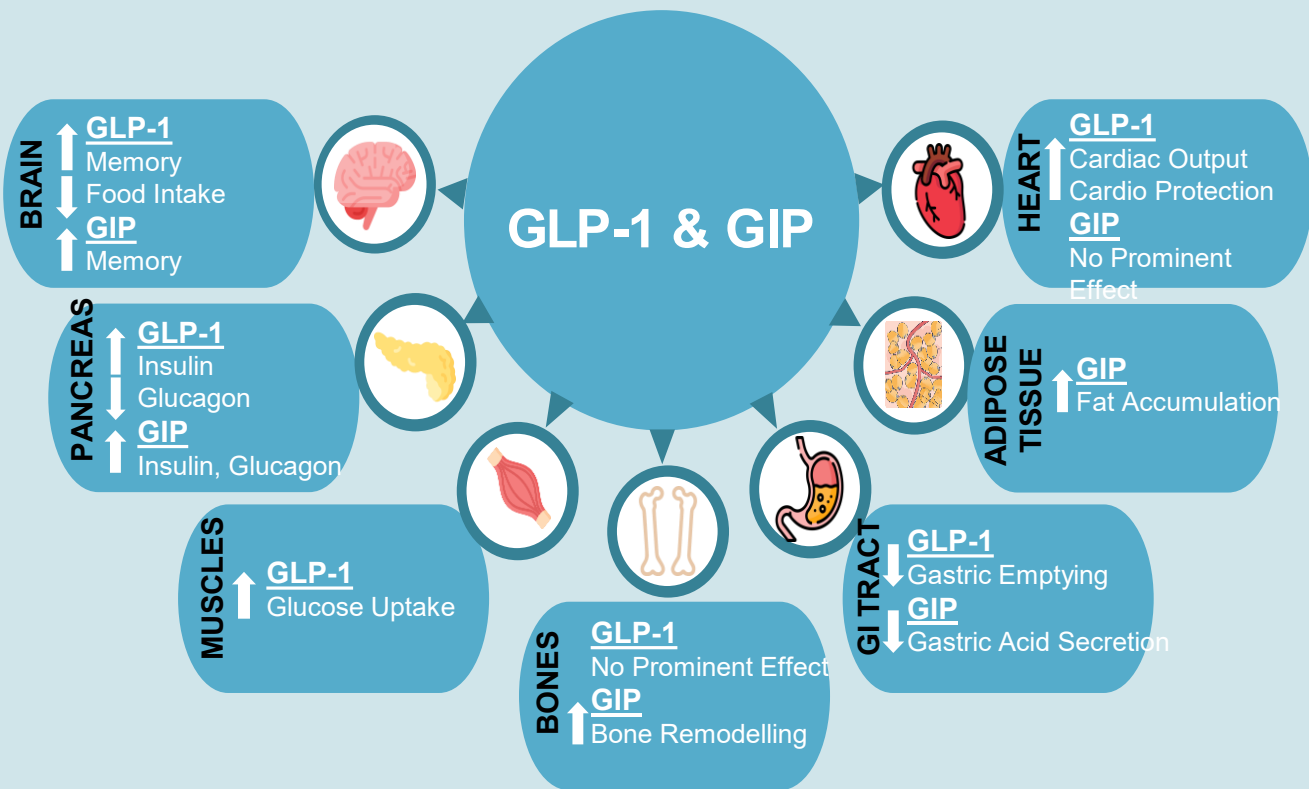

Illustration demonstrating the secretion and effects of GLP-1 and GIP peptides on various organs

GLP-1 vs GIP

- GLP-1 (Glucagon-Like Peptide-1): incretin hormone that plays a crucial role in glucose metabolism
- GIP (Glucose-Dependent Insulinotropic Polypeptide): another incretin hormone that enhances insulin secretion in response to nutrient intake
- GLP-1 medications enhancing insulin secretion and reducing glucagon levels, thereby lowering blood sugar
- Whereas GIP medications focus on stimulating insulin release in response to meals and have a more pronounced effect on lipid metabolism

FDA-Approved GLP-1/GIP Medications

A collection of FDA-approved GLP-1/GIP medications, including:

- OZEMPIC®** semaglutide injection 0.5mg, 1mg
- SOLIQUA™** insulin glargine (100 U/mL) & lixisenatide
- VICTOZA®** liraglutide injection 1.2 mg | 1.8 mg
- Xultophy® 100/3.6** insulin degludec & liraglutide injection 100 units/mL & 3.6 mg/mL
- mounjaro®** (tirzepatide) injection 0.5 mL 2.5 mg | 5 mg | 7.5 mg | 10 mg | 12.5 mg | 15 mg
- Saxenda®** liraglutide injection 3mg
- wegovy®** semaglutide tablets 25mg, semaglutide injection 2.4 mg
- trulicity®** (dulaglutide) injection
- Adlyxin™** lixisenatide injection 20mcg
- RYBELSUS®** ONCE-DAILY semaglutide tablets 7mg | 14mg
- zepbound™** (tirzepatide) injection 0.5 mL 2.5 mg | 5 mg | 7.5 mg | 10 mg | 12.5 mg | 15 mg

An "APPROVED" stamp is visible in the top right corner of the medication list.

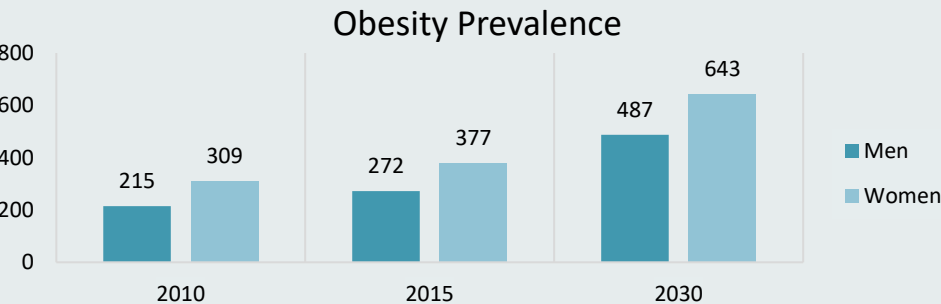

EPIDEMIOLOGY

Key Factors

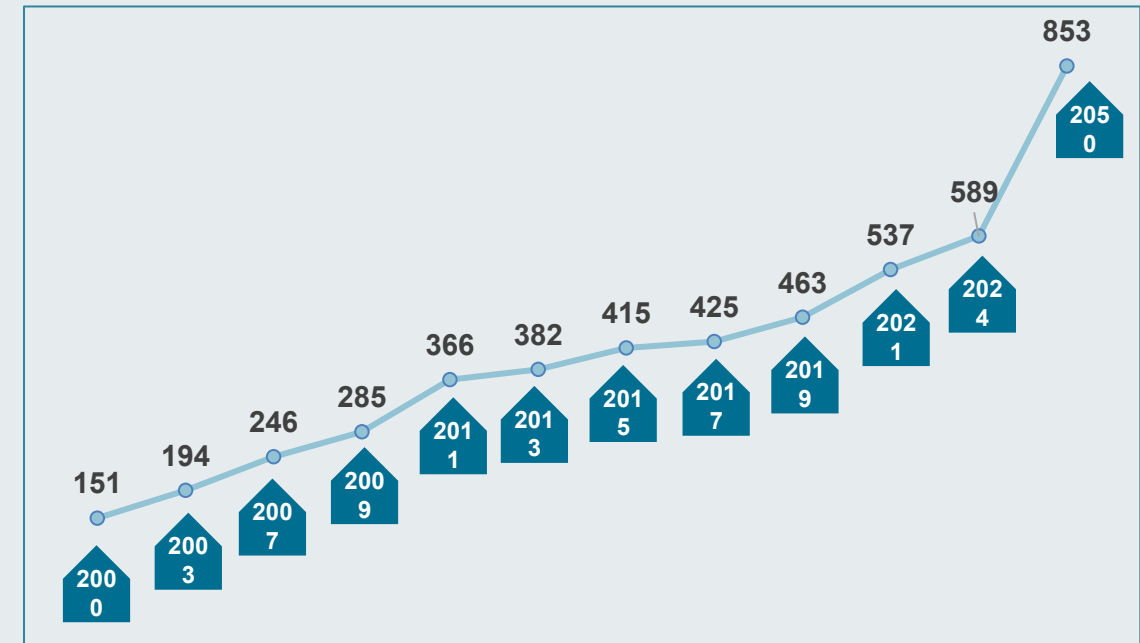

Obesity Epidemiology

- Globally, total number of adults living with obesity will increase by more than 115% between 2010 and 2030, from 524M to 1.13B

T2D Epidemiology

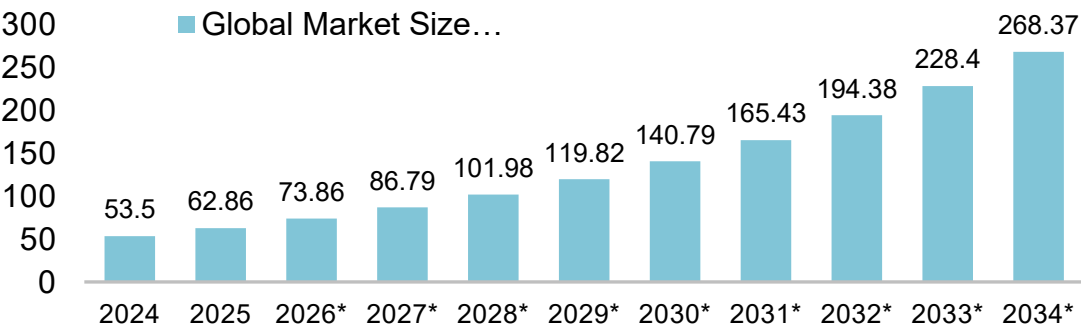

- Annual estimated and forecasted global number of diabetes cases among people aged 20 to 79, expressed in millions

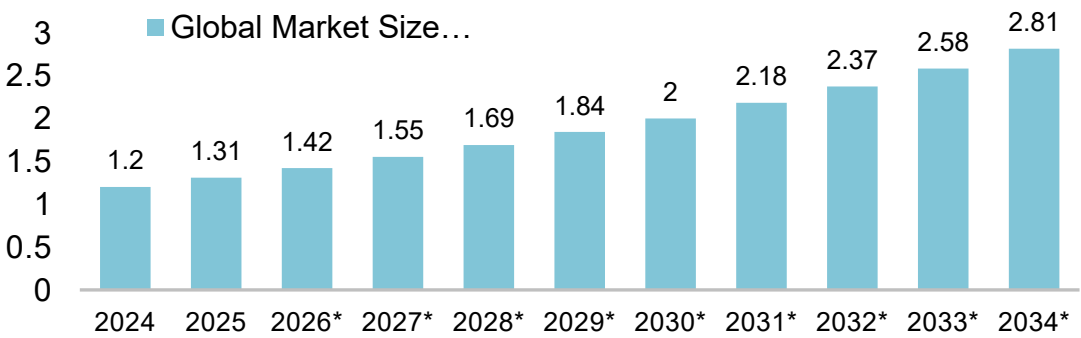

Global diabetes cases among adults aged 20–79 are projected to rise 44.8% from 2024 to 2050, highlighting a rapidly expanding and long-term disease burden

MARKET OUTLOOK

GLP-1 Market Outlook

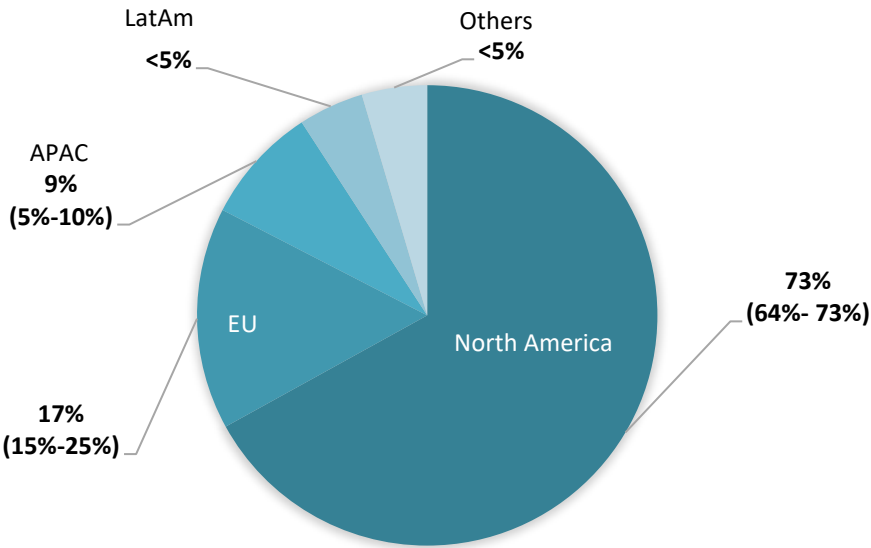

GIP Market Outlook

*: Estimated

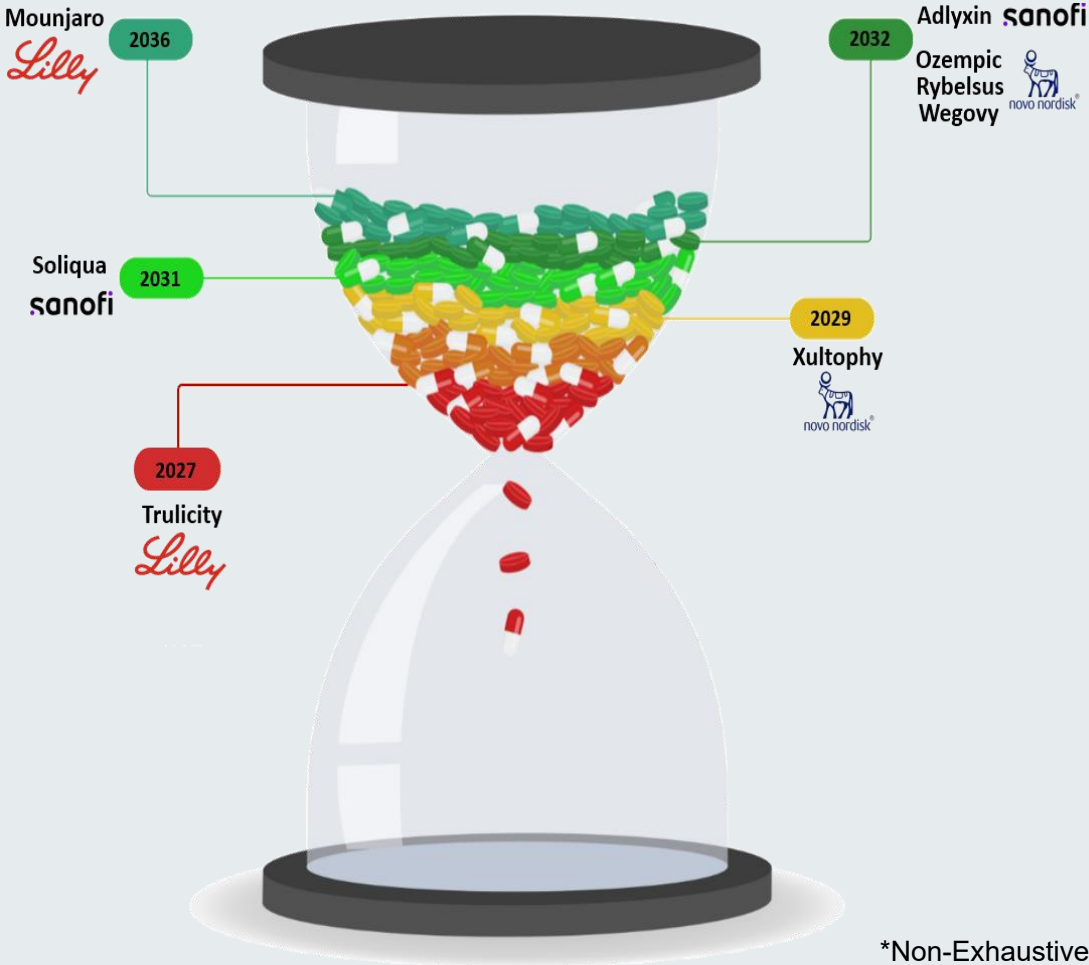

GLP/ GIP Region-wise Market Outlook

- GLP-1/GIP receptor agonists, including dual agonists like Mounjaro/Zepbound, dominate the diabetes and obesity treatment markets, with North America holding the largest regional share at around 64-73% of the global GLP-1 market in recent years.
- Europe shows 65-75% GLP-1 dominance with steady dual uptake, that follows as the second-largest region, collectively accounting for about 90% of the market alongside North America.
- Asia-Pacific exhibits the fastest growth potential due to rising diabetes prevalence and improving healthcare access

PATENTS*

Patent Expiry*

PRODUCT	US	EU	JAPAN	COMPANY
Xultophy	2029	2028	Expired	
Rybelsus	2032	2031	2031	
Ozempic	2032	2031	2031	
Wegovy	2032	2031	2031	
Trulicity	2027	2029	2029	
Mounjaro/Zepbound	2036	2037	2040	

Additional patents expiry (as per orange book):

- Ozempic (2mg/3mL; 4mg/3 mL): 2033; Ozempic (8mg/3mL): 2038
- Rybelsus (1.5mg; 4mg; 9mg): 2039; Rybelsus (3mg; 7mg; 14mg): 2034

Trulicity (as per company annual report 2024):

- Biologics data protection: US – 2027

Mounjaro/ Zepbound (as per company annual report 2024):

- Data protection patent:
 - US – 2027
 - Major EU Countries – 2033
 - Japan – 2030

Ozempic and Wegovy:

- In India, primary patent is expected to expire in March 2026, which may enable Indian Pharma companies to introduce generic version leading to substantial reduction in treatment costs and improved patient accessibility

REGULATORY AFFAIRS AND POLICIES

FDA: IMPORT ALERT 66-80

FDA

Dec 03, 2025

The 2025 FDA import alert tells inspectors to automatically detain most foreign-sourced GLP-1 bulk drug substances like semaglutide and tirzepatide because many appear adulterated or come from firms that won't cooperate with inspections. It notes that shortages drove demand, but about 20% of 48 API sites reviewed were noncompliant, so only manufacturers on a vetted "Green List" that prove full CGMP compliance and provide detailed quality documentation are exempt from detention.

WHO ISSUES GLOBAL GUIDELINE ON THE USE OF GLP-1 MEDICINES IN OBESITY

Dec 01, 2025

WHO's 2025 guideline treats obesity as a chronic disease and conditionally recommends long-term GLP-1 therapy (liraglutide, semaglutide, tirzepatide) for adults, except pregnant women, when prescribed by trained clinicians alongside structured lifestyle support. It emphasizes that medicines must sit within wider policies that create healthier environments and protect high-risk groups, and warns that without major action on affordability, manufacturing, equity, and falsified products, fewer than 10% of eligible people will access GLP-1 treatment by 2030.

WHO UPDATES LIST OF ESSENTIAL MEDICINES TO INCLUDE KEY CANCER, DIABETES TREATMENTS

Sep 05, 2025

WHO's 2025 Essential Medicines List update adds 20 adult and 15 pediatric medicines, including new cancer immunotherapies and GLP-1/GIP drugs for diabetes with obesity, to match current global health needs. It highlights PD-1/PD-L1 agents like pembrolizumab and GLP-1 receptor agonists (semaglutide, dulaglutide, liraglutide) plus tirzepatide as priority treatments, while urging countries to use fair pricing, promote generic competition, and strengthen primary care so these high-impact medicines become widely accessible, especially in low- and middle-income settings.

FDA CLARIFIES POLICIES FOR COMPOUNDERS AS NATIONAL GLP-1 SUPPLY

Apr 28, 2025

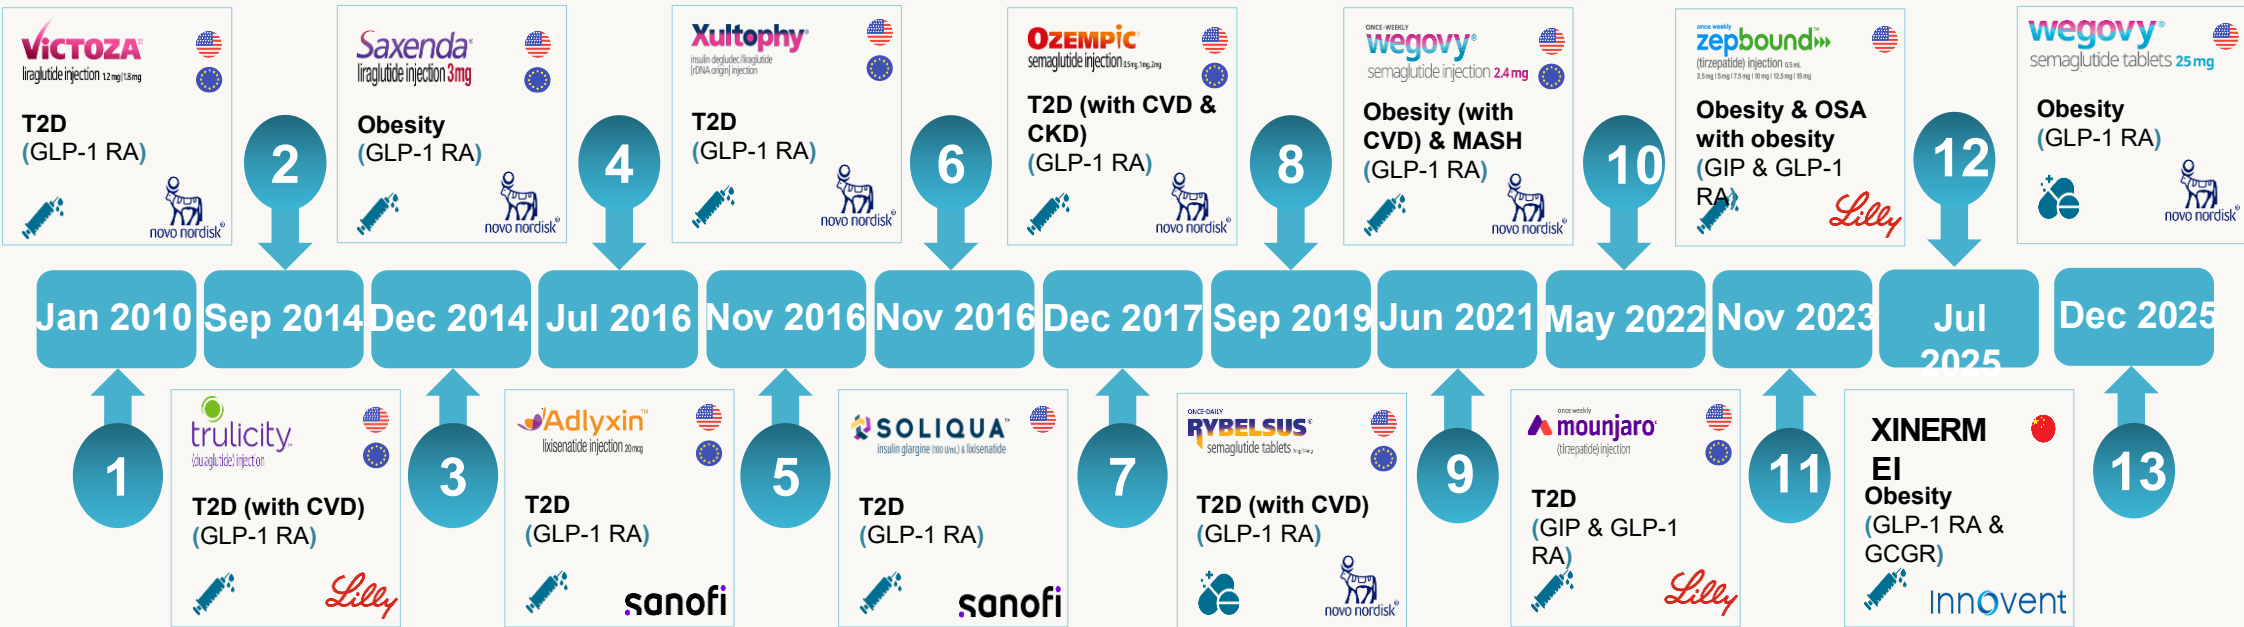

FDA

The FDA has announced that, as shortages of tirzepatide and semaglutide injections resolve, it will phase out the temporary enforcement discretion allowing broader compounding of these GLP-1 drugs. The agency will revert to stricter regulations under sections 503A and 503B of the FD&C Act, which prohibit compounding of FDA-approved products. The update sets early to mid-2025 as the deadline for state-licensed pharmacies, physicians, and outsourcing facilities to stop routinely compounding tirzepatide and semaglutide copies. It confirms that dulaglutide and liraglutide remain in shortage and warns that poor-quality or unsafe compounded products may face action.

APPROVED PRODUCTS

OCTAVUS INSIGHT

- ❑ Novo Nordisk dominated the first decade (VICTOZA, SAXENDA, OZEMPIC, WEGOVY), with Eli Lilly now closing the gap via dual GIP/GLP-1 drugs like MOUNJARO AND ZEPBOUND, while regional players such as Innovent (XINERMEI) emerge in key markets like China
- ❑ GLP-1 and dual-agonist sales are expected to grow rapidly through 2030, driven by obesity demand and wider reimbursement
- ❑ Labels have broadened from T2D to T2D with CVD/CKD and obesity plus OSA and MASH, supported by strong outcome data and guidelines
- ❑ This indication layering expands the treatable population and establishes incretin therapies as core tools for global cardiometabolic risk reduction, beyond glucose control alone

T2D: Type 2 Diabetes; **CVD:** Cardiovascular Disease; **CKD:** Chronic Kidney Disease; **MASH:** Metabolic dysfunction-associated steatohepatitis; **OSA:** Obstructive Sleep Apnea **Glip-1:** Glucagon-like peptide-1 receptor agonist; **GIP:** Glucose-dependent insulinotropic polypeptide; **GCGR:** Glucagon Receptor

OCTAVUS INSIGHT

- ❑ Large deals such as Pfizer-Metsera (\$10B), Sciwind-Verdiva (\$2.47B), CSPC–Madrigal (\$2.12B), Septerna-Nov Nordisk (\$2.2B), Jiangsu Hansoh-Regeneron (\$2.01B), The United Labs-Nov Nordisk (\$2B), and Camurus-Eli Lilly (\$870M) show very high willingness to pay for differentiated metabolic, liver, and obesity-adjacent assets
- ❑ There is a trend towards licensing agreements, particularly “Dev and Commercial License” arrangements, as firms opt to share risks while leveraging external innovations
- ❑ Companies like Novo Nordisk and Eli Lilly are creating ecosystems through collaborations with various partners, which enhance their GLP-1 offerings through integrated digital health and service contracts
- ❑ Strategic partnerships with service providers like GoodRx and Teladoc illustrate the growing importance of patient engagement and supply chain services in the pharmaceutical landscape

OCTAVUS INSIGHT

- ❑ Over the last five years, a small group of biotech and therapeutics companies has successfully made it to IPO, raising anything from \$10M to well over \$300M
- ❑ The biggest fundraises, like Septorna Inc. and Metsera Inc. (Pfizer), show that with strong and strategic sponsors, public markets are willing to back it in a meaningful way
- ❑ The mix of newer names and big-pharma–backed ventures tells clients that innovation is coming from both start-ups and established players, creating plenty of potential partners rather than just a few “winners”
- ❑ Companies with new capital that are positioned to advance trials, launch products, and engage in partnerships, highlighting their significance for future collaboration and competitive dynamics

UPCOMING MILESTONE*

COMPANY	MOLECULE	SUMMARY
	Wegovy 7.2mg	sNDA submitted to FDA in Nov’25 based on P3 STEP-UP study for obesity; Regulatory decision expected in 1Q 2026
	CagriSema	- NDA submitted to FDA in Dec’25 based on P3 REDEFINE 1 study for obesity; Regulatory decision expected in late 2026 - Plans to submit for regulatory approval in 1Q 2026 based on P3 REDEFINE 2 study for obesity and T2D; Regulatory decision expected in 2026 - 2027
	Amycretin (SC & Oral)	- Plans to launch P3 development program for weight management for adults in 1Q 2026 - Based on these results, planning to initiate P3 study development programme with amycretin for T2D in 2026
	Orforglipron	- Plans to submit for regulatory approval in 2025 end for obesity and in early 2026 for T2D based on P3 ATTAIN-1 study; Regulatory decision expected in 2Q 2026 - Plans to submit for regulatory approval in 2025, based on P3 ATTAIN-2 study for obesity and T2D; Regulatory decision expected in 2Q 2026 - Expected to release readout data for ACHIEVE-4 study for obesity and T2D in 1Q 2026 - Plans to submit for T2D to global regulatory agencies in 2026, while submission for obesity is on track to occur by 2025 end
		Readout of P3 TRIUMPH-4 study for weight loss expected in late 2025 or early 2026, with potential FDA approval expected in 2027 - 2028
	Retatrutide	Readout of P3 TRIUMPH-4 study for weight loss expected in late 2025 or early 2026, with potential FDA approval expected in 2027 - 2028
	Survodutide	Launch anticipated in 2027 or 2028 based on P3 study results for obesity and fatty liver
	CT-388	Expected filing in 2028+ for obesity and T2D
	MariTide	Readout of P3 study for obesity with T2D/without T2d to be expected in early 2027; Regulatory decision expected in 2028
	VK2735	- Expected to release readout data of P3 VANQUISH-1 study for obesity in late 2027, with potential FDA approval in 2028 – 2029 - Expected to complete enrollment in P3 VANQUISH-2 study for obesity in 1Q 2026
		Expected to complete enrollment in P3 VANQUISH-2 study for obesity in 1Q 2026
	Mazdutide	Planning to present detailed results from P3 GLORY-2 registrational study for moderate-to-severe obesity at future international academic conferences or in scientific publications
	BGM0504	Planning to launch for T2D and obesity in 2027

ADVANCEMENTS AND MILESTONES

Eli Lilly: Orforglipron (GLP-1)

Eli Lilly released positive results from P3 ACHIEVE-2 and ACHIEVE-5 studies as it met its primary and secondary endpoints at 40 weeks for T2D

- P3 ACHIEVE-2 study evaluated Orforglipron vs dapagliflozin (SGLT-2i) for T2D inadequately controlled on metformin
- P3 ACHIEVE-5 study evaluated orforglipron vs PBO for T2D and inadequate glycemic control with titrated insulin glargine, with or without metformin and/or SGLT-2i

Milestone:

- Expected to release readout data for ACHIEVE-4 study in 1Q 2026
- Planning to submit orforglipron for T2D to global regulatory agencies in 2026, while submission for obesity is on track to occur by 2025 end

ACHIEVE-2 Primary Endpoint (NCT06192108)						ACHIEVE-5 Primary Endpoint (NCT06109311)

	Treatment- regimen estimand	-1.2 %	-1.5 %	-1.6%	-0.8%		Treatment- regimen estimand	-1.6%	-1.9%	-1.8%	-0.8%

Viking Therapeutics: VK2735 (GLP-1/GIP receptors)

Viking Therapeutics completed enrollment in P3 VANQUISH-1 study of SC VK2735 (GLP-1/GIP dual receptors agonist) for obesity

- P3 VANQUISH-1 study will evaluate efficacy and safety of VK2735 administered once weekly for 78 weeks

Concurrently, Viking Therapeutics also conducting P3 VANQUISH-2 study of SC VK2735 (GLP-1/GIP dual receptors agonist) for T2D who have obesity or are overweight

- Currently enrolling patients

Milestone:

- Expected to release readout data of P3 VANQUISH-1 study in late 2027, with potential FDA approval in 2028 - 2029
- Expected to complete enrollment in P3 VANQUISH-2 study in 1Q 2026

ADVANCEMENTS AND MILESTONES

Innovent Biologics: Mazdutide (GLP-1/ GCG dual receptor agonist)

Innovent Biologics announced that the CDE of China’s NMPA acceptance of supplementary application of 9 mg dosage of mazdutide (GLP-1/ GCG) for review for moderate-to-severe obesity, based on the P3 GLORY-2 registrational study results

Results Analysis:

- P3 GLORY-2 registrational study results evaluated efficacy and safety of mazdutide 9 mg vs PBO in Chinese adults for obesity, as it showed
 - **Primary Endpoints:** Mazdutide 9 mg group achieved a mean weight reduction of 18.55%, compared to 3.02% in the placebo group. 44.0% of participants in the mazdutide 9 mg group achieved a weight reduction of 20% or more, versus 2.6% in the placebo group
 - **Secondary Endpoints:** Mazdutide 9 mg led to a weight loss of 20.08% by Week 60 in non-diabetic participants, with nearly 48.7% losing over 20% of their weight, compared to 3.1% in the PBO group. The weight loss trend had not plateaued by the study's end
 - Furthermore, mazdutide 9 mg significantly led to substantial reduction in liver fat content, achieving a mean % decrease from the BL of 71.9%. Additionally, significant improvements in various cardiometabolic metrics, including BP, blood lipids, and serum uric acid levels, as well as a marked reduction in waist circumference
 - **Safety:** Mazdutide 9 mg showed favorable safety profile, with no new AEs

Milestone:

- Planning to present detailed results from P3 GLORY-2 registrational study at future international academic conferences or in scientific publications

Novo Nordisk: Amycretin (GLP-1/Amylin receptors)

Novo Nordisk released positive results from P2 study of Amycretin (GLP-1/ Amylin receptors) administered as once-weekly SC and Once- daily oral for T2D

- P2 study evaluated efficacy, safety and PK of once-weekly SC and once-daily oral amycretin vs PBO for T2D inadequately controlled on metformin with or without SGLT2i as SoC

Results analysis:

- In once-weekly SC, at mean baseline HbA_{1c} of 7.8%, -1.8% achieved dose-dependent reductions in HbA_{1c} by week 36 and 89.1% and 76.2% of patients achieved HbA_{1c} <7% and ≤6.5% respectively
- In once-daily oral, at mean baseline HbA_{1c} of 8.0%, -1.5% achieved dose-dependent improvements in HbA_{1c} by week 36, 77.6% and 62.6% of patients achieved HbA_{1c} level of <7% and ≤6.5% respectively
- From a mean BL body weight of 99.2 kg, SC amycretin showed statistically significant weight loss of up to -14.5%, Whereas, from mean BL body weight of 101.1 kg, oral amycretin also showed statistically significant weight loss of up to -10.1%
- **Safety:** Both SC and oral amycretin showed favorable and well-tolerated safety profile, consistent with other incretin and amylin-based therapies.
 - Most common AEs were gastrointestinal, and the vast majority were mild to moderate in severity

Milestone:

- Based on these results, planning to initiate P3 study development programme with amycretin for T2D in 2026

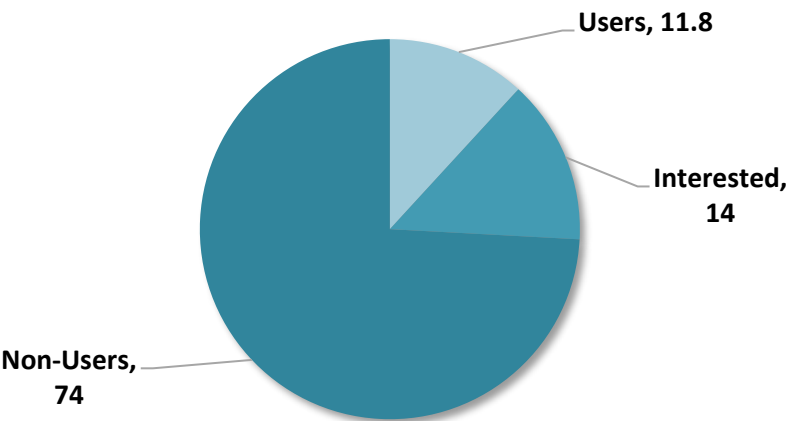

MARKET TRENDS

THERAPY TRENDS

- GLP-1 receptor agonists are being researched for uses beyond diabetes and obesity, like heart disease, fatty liver disease, and brain conditions, which will likely increase the market
- Novo Nordisk has recently received approval for semaglutide in the treatment of MASH
- Companies like Eli Lilly, Boehringer Ingelheim, Novo Nordisk, Amgen, Viking Therapeutics, Regor Therapeutics, Carmot Therapeutics, Roche, and others are developing novel GLP-1 agonists for upcoming market entry

GLP-1 PATIENT TRENDS

- About 11.8% of Americans have used GLP-1 drugs to lose weight, around 14% are interested, and 74% do not plan to use (according to RAND survey)
- Women, particularly aged 30-64, use GLP-1 drugs much more than men, highlighting the need for gender-tailored messaging and benefits

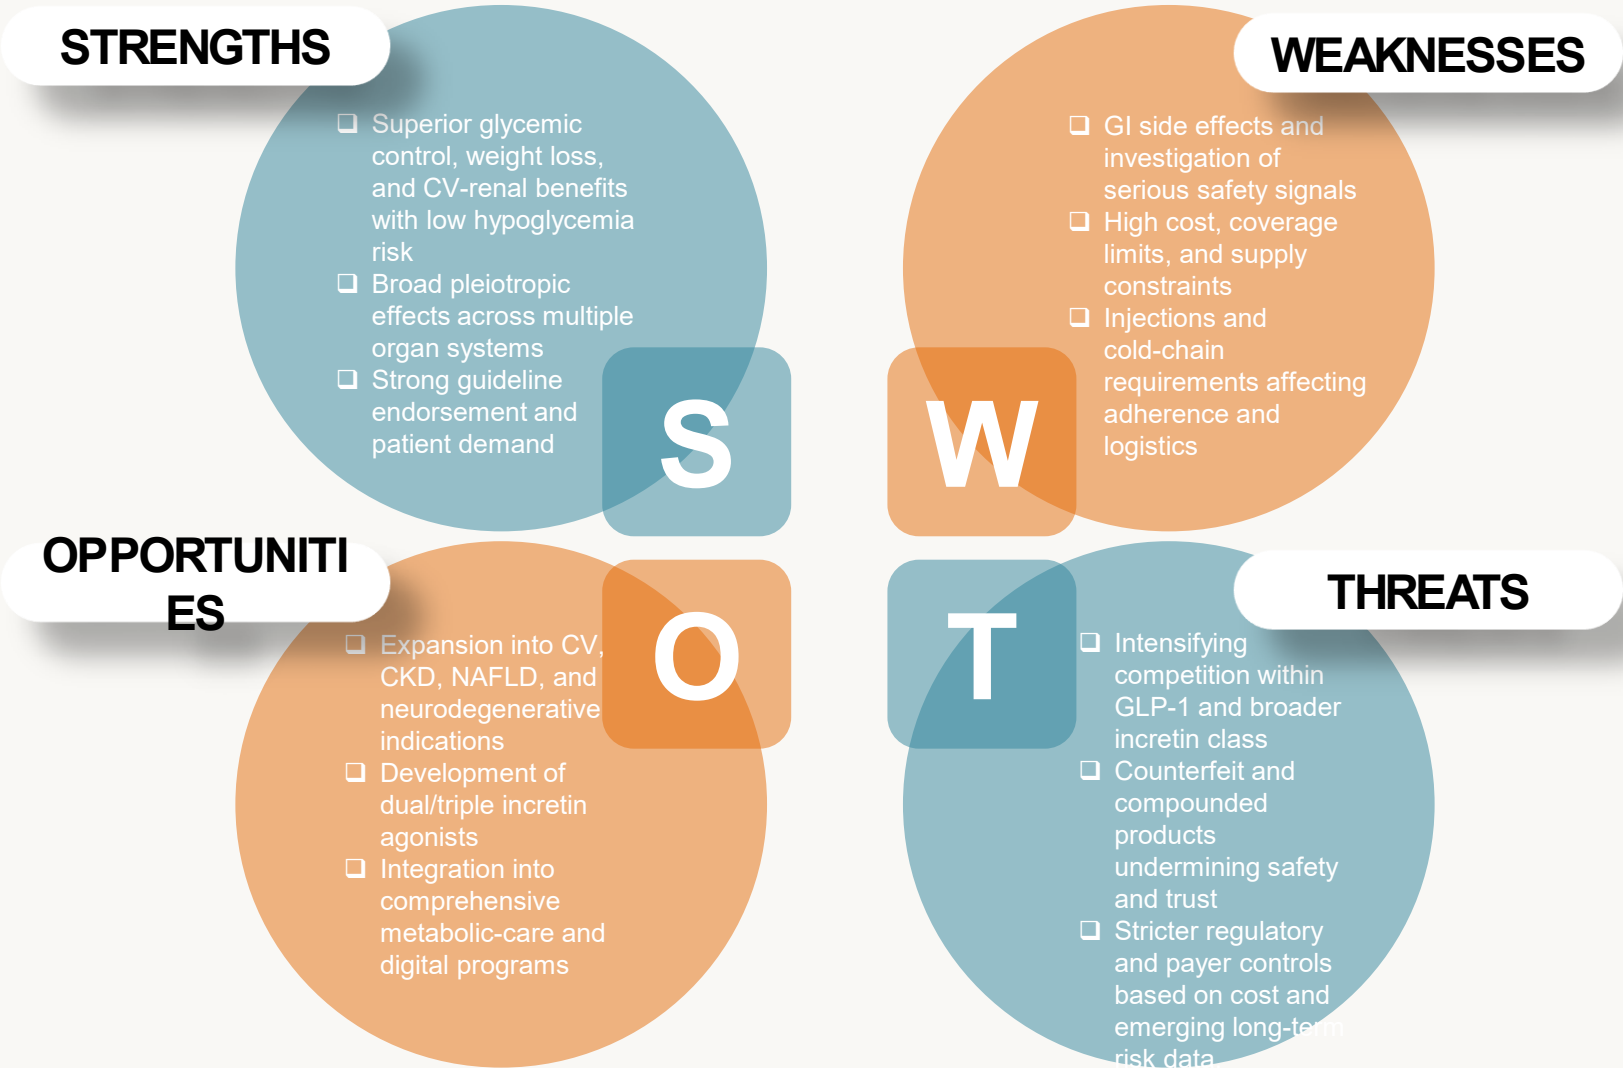

FINANCIAL HIGHLIGHTS

- The global GLP-1 receptor agonist market size was estimated at \$53.5B in 2024 and is projected to reach \$268.3B by 2034, growing at a CAGR of 20.10% from 2025 to 2034
- Eli Lilly's revenue rose 54% to \$17.60 billion in Q3 2025, mainly driven by increased sales volume of its GLP-1 agonist products, MOUNJARO and ZEPBOUND
- The GLP-1 agonist market is poised for growth next year, supported by Eli Lilly's investments in manufacturing capacity and oral candidates such as orforglipron

DIGITAL TRENDS

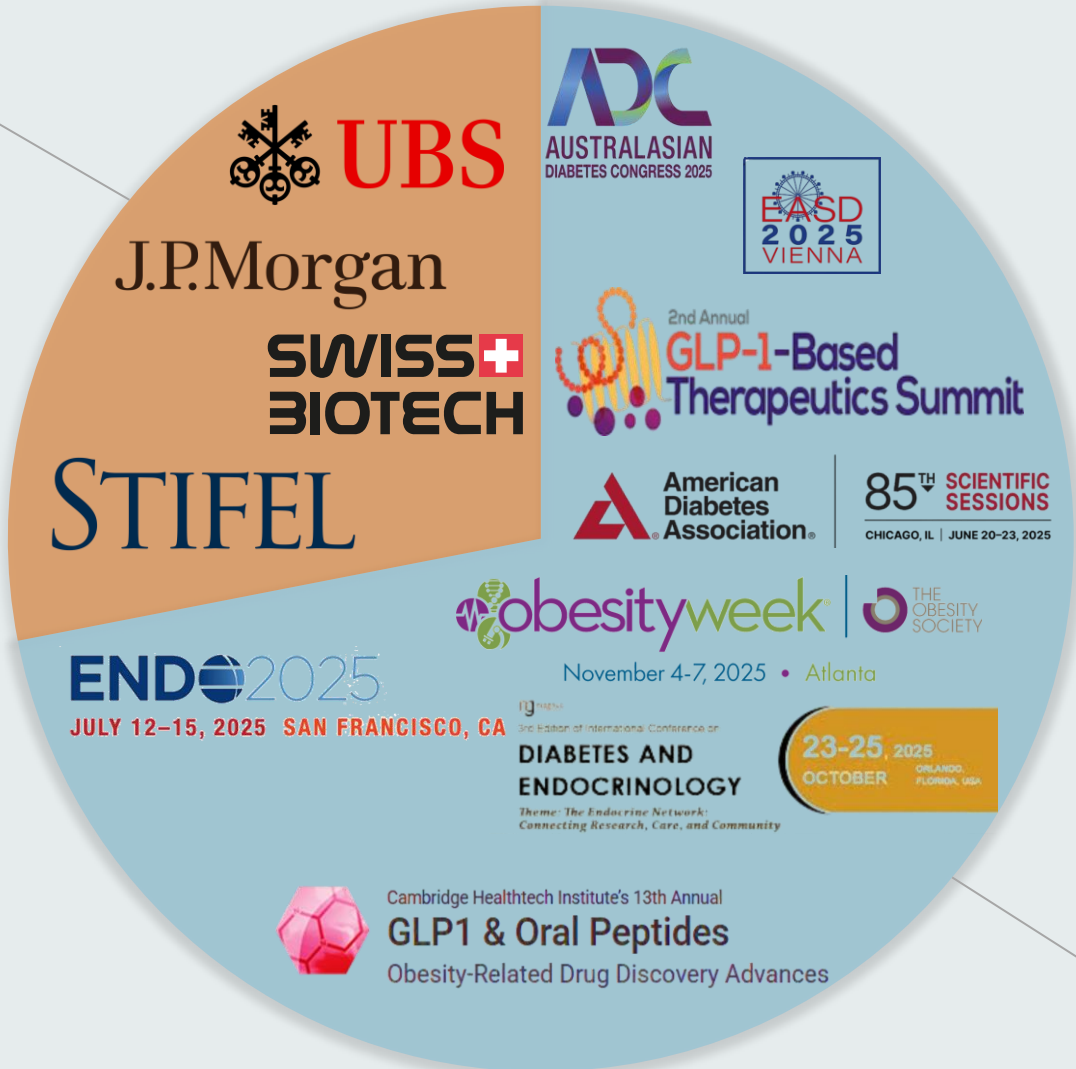

- The global autoinjectors market is rapidly growing, with Ypsomed and Sidekick Health partner to launch a smart autoinjector platform for improved GLP-1 obesity treatment
- Digital health platforms, like Hims & Hers, Ro, and WeightWatchers launched GLP-1 programs with prescriptions, coaching, and insurance help to meet Wegovy/Ozempic demand
- In April 2025, Novo Nordisk teamed up with Hims & Hers for the first U.S. online direct sales of Wegovy via telehealth. This improved access as restrictions hit compounded versions

SWOT ANALYSIS (GLP-1 focused)

GLOBAL CONFERENCES 2025

OCTAVUS INSIGHT

- Major players like Eli Lilly, AstraZeneca, and Sanofi are expanding GLP-1 pipelines into diverse indications beyond obesity and diabetes, such as MASH, MASLD, kidney disease, Alzheimer's, and Parkinson's, underscoring the breadth of their development strategies and the expanding GLP-1 market
- New entrants like Canary Global, Fractyl Health, Constructive Bio, etc. are advancing GLP-1-related therapies, signaling strong industry-wide interest and highlighting GLP-1's strategic importance from both market and patient-need perspectives
- Targeted genetic therapies are emerging for GLP-1-based treatments, demonstrating that GLP-1 applications extend beyond specific patient populations to broader personalized care
- Ongoing research explores GLP-1 for addiction and substance use disorders, positioning it as a versatile platform far beyond endocrine diseases with vast therapeutic potential
- With GLP-1 research accelerating daily, now is an ideal time for companies to enter this dynamic market

SUMMIT PARTICIPANTS: FRONT-RUNNERS

EXECUTIVE SUMMARY

Market Opportunity: Incretin Hormones (GLP-1, GIP & Dual Agonists): A \$268B Global Opportunity

- Global GLP-1 market valued at **\$53.5B in 2024**, projected to reach **\$268.3B by 2034** (20% CAGR)
- Obesity prevalence expected to rise **>115%** from 524M (2010) to 1.13B adults by 2030
- Rapid expansion into **obesity, T2D, MASH, CV protection, and CNS indications**
- Strong reimbursement momentum and digital-health enabled access accelerating adoption
- High unmet need + powerful clinical outcomes = one of the fastest-growing therapeutic classes
- **Novo Nordisk is fueling market expansion by strategically cutting prices on its GLP-1 powerhouses**

Patent & Regulatory Landscape:

- Multiple high-value patents expiring over next decade → opportunity for generics/biosimilars
- Accelerated pathways for various therapeutics indication speeding approvals

Investment Thesis: Why Investors Should Prioritize the Incretin Segment:

- **Massive Market Expansion:** \$50B → \$268B within a decade
- **Extraordinary Efficacy:** Best-in-class weight reduction and metabolic improvements
- **Pipeline Depth:** Dual & tri-agonists poised to redefine standard of care
- **Strong Commercial Momentum:** Lilly & Novo are setting historic revenue records
- **Durable Demand:** Chronic conditions ensure long-term therapy needs
- **Multiple Entry Points:**
 - Innovator pipelines
 - Digital-health partnerships
 - Autoinjector/smart device companies
 - Future biosimilar opportunities post-patent expiry

Conclusion: Incretin therapeutics represent one of the strongest long-term growth opportunities in global biopharma, backed by robust science, expanding use-cases, and proven commercial demand

EXECUTIVE SUMMARY

Overview:

- GLP-1 and GIP based therapies are significantly changing the management of obesity and T2D, presenting as largest, fastest-growing biopharma opportunity over the next decades, that is being driven by strong data outcome and expanding into various multiple indication such as MASH, CVD, CKD, OSA
- Novo Nordisk and Eli Lilly being the market leaders, whose GLP-1 and dual agonist drugs dominates both diabetes and obesity segment
- The crowded late stage pipeline in single/ dual/ triple agonist along with oral and subcutaneous formulation and high value partnering and licensing deals shows intense competition and interest for the advancement in metabolic therapy area
- With the recent FDA and WHO guidelines on GLP-1 for quality, compounding and essential-medicine status, highlights both the strategic importance of these drugs and the need for secure, compliant supply chains and risk management.
- With the patent expiry from late 2030s onwards, open up the space for generic with low pricing and increasing market population

About Us

We specialize in delivering tailored consulting solutions that flexibly meet each client's unique needs, ensuring personalized and effective outcomes.

- CI & Monitoring
- Conference Coverage
- Market Sizing & Opportunity
- Pre-investment Due Diligence
- Company/Asset Prioritization

Business Intelligence

Data Analytics

Market Research

- Quantitative & Qualitative Research
 - Awareness, Trial & Usage (ATU) Studies
 - KOL & PAG Identification & Mapping
