GLOBAL MARKET ESTIMATION (\$B)

MARKET SHARE DISTRIBUTION (As per 2024)

- As of 2024, the global obesity treatment market is dominated by North America, accounting for 45% of the total share, driven by high disease prevalence, strong adoption of novel pharmacotherapies (e.g., GLP-1 agonists), and advanced healthcare infrastructure
- LAMEA (Latin America, Middle East & Africa) and Asia-Pacific follow with 20.7% and 19.8% shares respectively, reflecting rapid urbanization and increasing obesity awareness
- Europe contributes 14.6%, supported by growing government initiatives and lifestyle-management programs
- Overall, emerging regions are expected to experience the fastest growth through 2030 as healthcare access and obesity diagnosis rates continue to rise

ABOUT

ONCE-WEEKLY
wegovy®
semaglutide injection **2.4 mg**

Wegovy (Semaglutide) is a prescription medication, a glucagon-like peptide-1 (GLP-1) receptor agonist

APPROVED INDICATIONS

Wegovy (Semaglutide) approved for adults and pediatric patients (12+):

- Long-term weight management in obesity or overweight
- To reduce the risk of cardiovascular events
- Metabolic-associated Steatohepatitis (MASH)

DOSES & FREQUENCIES

WEEK

1–4: 0.25 mg weekly

5–8: 0.5 mg

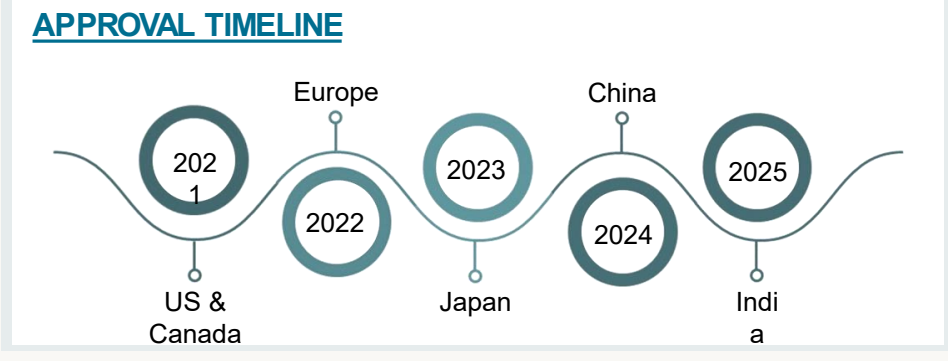

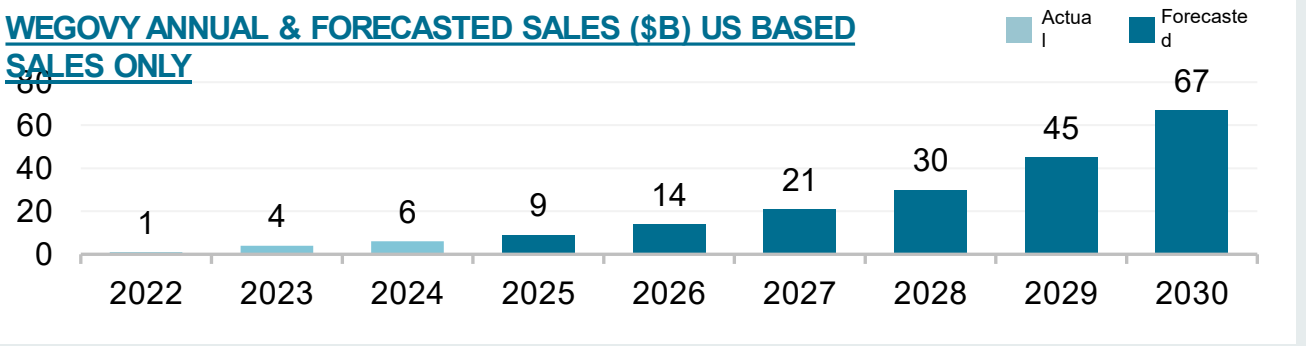

9–12: 1 mg

13–16: 1.7 mg

17 onward: 2.4 mg (maintenance)

MOA	ActRIIA/ActRIIB inhibitor
ROA	Subcutaneous
Status	Active, not recruiting
Primary Endpoint	Percent Change from Baseline in Body Weight at Week 24

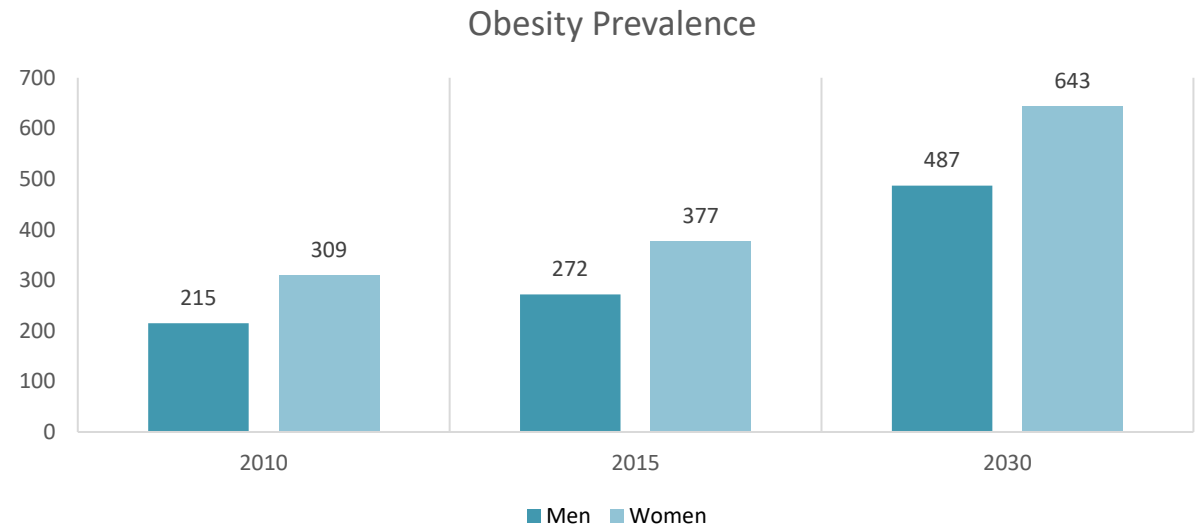

OBESITY: MARKET TRENDS

THERAPY TRENDS

- GLP-1 receptor agonists, such as Semaglutide, demonstrate a 15% or more average weight loss in clinical trials
- There is an increasing emphasis on oral formulations as more patients favor non-invasive therapies
- Dual and triple agonist drugs (GLP-1/GIP/glucagon), such as Tirzepatide, are promising enhanced and targeted weight-loss effects, comparable to surgical results

EPIDEMIOLOGICAL PATTERN

Globally, total number of adults living with obesity will increase by more than 115% between 2010 and 2030, from 524M to 1.13B.

FINANCIAL HIGHLIGHTS

- Between 2024-2034, the global anti-obesity medications market is projected to grow at a CAGR of 13–15%, reaching approximately \$130B
- Eli Lilly's top-selling anti-obesity drugs saw a revenue increase of 54% to \$17.60B in Q3 2025, largely due to volume growth from MOUNJARO and ZEPBOUND
- Novo Nordisk's obesity care growth for the first half of 2025 reached \$6009.27M, reflecting a 58% growth

DIGITAL TRENDS

- The global autoinjectors market, valued at \$68.1B in 2024, is expected to grow at a CAGR of 14.3% from 2025 to 2034
- Ypsomed and Sidekick Health to launch a connected health platform aimed at transforming obesity care
- The collaboration integrates Ypsomed's SmartPilot, a sensor-enabled add-on for YpsoMate autoinjectors, with Sidekick's app-based patient support program to deliver real-time injection data and behavioral health support to patients using GLP-1 therapies

NOVO NORDISK @ ObesityWeek 2025

Title: Novo Nordisk's CagriSema associated with significant reduction in blood pressure and showed anti-inflammatory effects while reducing the proportion of patients at risk of developing heart disease over time in new analyses at ObesityWeek

Summary: Presented post-hoc results of P3 REDEFINE1 study of CagriSema (2.4 mg/2.4 mg), that showed:

- 0.9 mmHg reduction in systolic blood pressure, allowing 40% of people on blood pressure medications to reduce or stop their medication
- ~70% of patients showed reduction in key inflammatory marker associated with increased cardiovascular risk
- Also showed that fewer people on CagriSema were at intermediate-to-high risk of developing ASCVD within the next 10 years
- Showed favourable safety results and results were published in *Hypertension*

Title: Novo Nordisk presents four new analyses on oral semaglutide 25 mg (Wegovy in a pill) at ObesityWeek 2025, including demonstrated reductions in cardiovascular risk factors

Summary: Presented results of P3 OASIS 4 study of semaglutide 25 mg vs PBO, that showed:

- Participants treated with oral semaglutide 25 mg were more likely to achieve ≥15% body weight reduction
- Within the semaglutide group, more people who achieved ≥15% body weight reduction saw larger improvements than those with <15% weight reduction in systolic (-10.1 mmHg vs -4.1 mmHg) and diastolic (-4.3 mmHg vs -1.1 mmHg) blood pressure
- Showed reduction in levels of inflammatory marker C-reactive protein (0.34 vs 0.74) and in lipids (blood fats), including non-high density lipoprotein cholesterol (0.90 vs 0.96) and triglycerides (0.73 vs 0.87)

Title: Novo Nordisk Wegovy users achieved waist and BMI targets linked to improved health and low risk of obesity-related complications

Summary: Presented results of P3b STEP UP study of Wegovy, that showed:

- BMI under 27 and a waist-to-height ratio of less than 0.53

Leadership Team

Our team comprises seasoned professionals and emerging talent with diverse expertise in life sciences and healthcare, blending years of industry experience with fresh perspectives to drive innovative solutions and comprehensive insights for our clients.
