Additional: 1 Beautiful Bill

Executive Summary

- **CDx is becoming integral to precision drug development**, the FDA lists 168 biomarker-drug pairings linked to approved diagnostic tests, supporting biomarker-led patient selection, trial design, and treatment access
- **The CDx market is expanding rapidly**, projected in the deck to grow from \$9.37B in 2026 to \$28.75B by 2035, a 13.3% CAGR as targeted therapies and biomarker-defined populations increase
- **Broader molecular profiling is replacing sequential single-marker testing**, with NGS, comprehensive genomic profiling and multiplex platforms complementing traditional IHC, FISH and PCR to capture a wider range of actionable alterations
- **CDx is expanding beyond one-time treatment selection toward continuous and more personalized decision-making**, with liquid biopsy/MRD, resistance monitoring, AI-assisted diagnostics, spatial/multi-omic approaches and decentralized testing emerging as important next-generation applications
- **Scale, partnerships and evidence are becoming key competitive differentiators**, as high development costs, regulatory requirements, reimbursement and implementation complexity favor integrated pharma-diagnostic ecosystems and established platform players

CDx Is Becoming a Strategic Pillar of Precision Medicine

CDx: Connecting Biomarkers to Precision Medicine

CDx translates validated biomarker results into treatment decisions, enabling the safe & effective use of corresponding therapies

The CDx Value Chain

1

IDENTIFY

Biomarker detection

2

SELECT

Right patient, Right therapy

Identify biomarker defined patients most likely to benefit or at increased safety risk

3

DEVELOP

Smarter drug development

Enable biomarker guided development, patient selection, and targeted clinical trial design

4

DELIVER

Precision treatment at scale

Support patient identification, treatment adoption and access

HOW THE LANDSCAPE IS EVOLVING

Current

- IHC
- FISH
- PCR
- NGS

Shift

Emerging

- CGP
- Liquid biopsy
- Digital pathology
- Spatial & Multi omics

From predominantly single marker, tissue based testing toward a multi modal testing ecosystem that improves biomarker coverage, tissue stewardship, testing scalability, and access

WHY IT MATTERS

- Makes precision medicine clinically actionable
- Improves treatment benefit-risk by identifying likely responders
- Supports regulatory approval and label directed patient selection
- Enables faster, more efficient biomarker-driven clinical development
- Strengthens market access, adoption, and differentiation of targeted therapies

Growing Precision Medicine Market Is Expanding the CDx Opportunity

Market Landscape CDx

Market size outlook (2025 – 2035)

MARKET SIZE (\$B)

\$28.75B

Projected market size by 2035

13.27%

CAGR, 2026 - 2035

Asia-Pacific

Fastest growing region, 2026 - 2035

KEY HIGHLIGHTS

- ❖ **Strong market expansion**
The market more than triples over the decade from \$9.37B growing at a 13.3% CAGR to \$28.75B by 2035
- ❖ **North America leads, Asia-Pacific is the consistent growth story**
North America dominated the market with a revenue share of 39.9% in 2025, while Asia-Pacific is projected to grow at the fastest pace among all regions.
- ❖ **Oncology-led market today, but diversifying beyond cancer**
Oncology held 56.5% share in 2025; assays, kits and reagents led products at 59.2%. Cardiovascular disease is now the fastest-growing indication, signaling diversification beyond oncology.

KEY INSIGHTS

- ❖ **CDx is now a built-in requirement of drug development**
The FDA lists 168 biomarker-drug pairings linked to approved tests. Foundation Medicine hit 100 approved CDx indications across the US and Japan in December 2025.
- ❖ **Liquid biopsy is the fastest-growing testing modality**
Tissue biopsy still leads by volume (77.95% in 2025), but liquid biopsy is growing at an 18.22% CAGR through 2031; Guardant360 CDx won FDA approval for this in September 2025
- ❖ **High costs are consolidating the field around established players**
Development can cost \$50-100M and 3-5 years, pushing smaller firms into big-pharma alliances, reflected in Guardant Health's ~\$149M acquisition of MetaSight Diagnostics (Dec 2025)

Mapping the CDx Competitive Landscape Across Key Indications

Analyzing the competitive dynamics shaping indication-specific diagnostics

CDx Technology Is Moving From Single-Marker Testing to Broader Molecular Profiling

The Engine Behind Companion Diagnostic

Next-generation technologies driving biomarker detection and treatment selection

	Traditional CDx	Multiplex Molecular CDx	Comprehensive Genomic Profiling	Liquid-biopsy CDx	Emerging CDx
Technology	- Single biomarker focused - IHC or FISH based - Typically assess protein expression and gene amplification e.g. HercepTest pharmDx; Vysis ALK Break Apart FISH Probe Kit	- Simultaneously evaluates multiple actionable biomarkers - PCR or targeted NGS based - Detects multiple alterations e.g. CRCdx RAS Mutation Detection Kit; Oncomine Dx Express Test	- Broad NGS panels to analyse a large set of genes - Detects multiple alteration and genomic signatures, including TMB and MSI e.g. FoundationOne CDx; FoundationOne Liquid CDx	- Minimally invasive, detects tumour derived biomarkers in body fluids. - Alternative to conventional tissue biopsy e.g. Guardant360 Liquid CDx; Signatera CDx	- Integrates AI-driven digital pathology, spatial imaging, multi-omic data into diagnostic approach. - Predictive and personalized insights
Clinical Impact	- Established patient selection for targeted therapies - Improved benefit–risk balance - Fast, interpretable, and accessible testing - Foundation of the CDx model	- Simultaneous testing of multiple predefined biomarkers - Shorter diagnostic pathway - Broader treatment option identification	- Higher detection of actionable alterations - Enables more precise therapy matching - Supports rare biomarker detection	- Enables longitudinal profiling - Detects acquired resistance - Supports approved blood based CDx use cases	- Provides spatial and cellular context - Improves response and resistance understanding - Strengthens immuno-oncology biomarker assessment
Limitations	- Limited multiplexing capability - Reduced biomarker coverage - Dependence on tissue quality - Assay, scoring, and interpretation variability	- Limited predefined gene and variant coverage - Risk of missing rare, novel, alterations - Dependence on adequate tumor content - Sensitivity to nucleic-acid quality	- Longer turnaround time and higher cost - Complex interpretation - Uncertain findings may not translate into patient benefit	- Risk of false negative or positive - Negative results may not exclude actionable alterations - Reduced sensitivity in early stage tumors	- Complex sample preparation and data-analysis - Standardization challenges - Need for clinical validation, regulatory clarity, and reimbursement evidence.

Abb: CDx: Companion diagnostic; FISH: Fluorescence in situ hybridization; IHC: Immunohistochemistry; MSI: Microsatellite instability; NGS: Next-generation sequencing; TMB: Tumor mutational burden

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

Liquid Biopsy

From a less minimally invasive alternative to a powerful driver of precision oncology

Liquid biopsy and its importance

Minimally invasive molecular profiling using tumour derived analytes from blood and other body fluids.

Key analytes: ctDNA, CTCs, cfDNA/cfRNA, exosomes, and tumour-associated proteins.

Why it matters as a companion diagnostic ?

-  Early blood-based cancer detection
-  Tracks tumour progress over time
-  Guides real-time treatment decisions

Recent Approvals

Diagnostic	Indication	Biomarker	Therapeutic agent	Approval Date
Guardant360® CDx	Breast Cancer	ER+/HER2- ESR1	ETCAMAH + CDK4/6 inhibitor	September, 2026
FoundationOne® CDx; FoundationOne® Liquid CDx	Prostate Cancer	HRR	TALZENNA + XTANDI	June, 2026
Guardant360® CDx	NSCLC	HER2	HERNEXEOS	June, 2026
Signatera CDx	MIBC	ctDNA MRD+	TECENTRIQ & TECENTRIQ HYBREZA	May, 2026
Guardant360® CDx	Breast Cancer	ER+/HER2- ESR1	VEPPANU	May, 2026
Guardant360® CDx	CRC	BRAF V600E	BRAFTOVI	January, 2026

Recent Collaborations

- **Guardant Health × Merck / Nuvalent:** Guardant Infinity will support global oncology trials, potential CDx development and commercialization of targeted therapies.
- **SOPHiA GENETICS × AstraZeneca:** Collaboration aims to support decentralized, globally deployable CDx models across trials and commercial launches.

Future outlook

- **MRD as Treatment-Selection CDx**
- **ctDNA is moving into pivotal trials :** Signatera in STELLAR-316 and AVTA 30-01, CLARITY in ALPHA3
- **MRD evolves into resistance monitoring:** Real-Time Variant Tracker added by Personalis
- **Implementation evidence:** Medicare Coverage, guideline progress drive adoption

Abb: CDx: Companion diagnostic; cfDNA: Cell-free DNA; cfRNA: Cell-free RNA; CRC: Colorectal cancer; CTCs: Circulating tumor cells; ctDNA: Circulating tumor DNA; MIBC: Muscle-invasive bladder cancer

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

CDx Ecosystem Is Becoming More Integrated: From Development to Commercialization

CDx at a Regulatory Crossroads

US FDA & EMA policy shifts shaping CDx development, 2024–2026

FDA

U.S. FOOD & DRUG ADMINISTRATION

Aug 2026: Oncology ISH Test Systems Reclassified to Class II

Certain oncology ISH systems can transition from PMA to the 510(k) pathway with special controls, reducing regulatory burden for eligible tests.

It aims to support innovation and improve patient access to oncology diagnostics, while special controls continue to ensure safety and effectiveness.

Note: Effective from 16 Sep 2026

Nov 2025: Proposed Reclassification of Oncology Nucleic Acid-Based CDx

FDA proposed a Class III-to-Class II shift for eligible oncology nucleic acid-based CDx, potentially enabling a faster 510(k)-based route to market.

The aim is to facilitate development of these oncology diagnostics while maintaining appropriate safety and effectiveness controls.

US FDA

EMA

Risk based regulation

Proportionate to diagnostic risk

Streamlined pathways

Potentially reducing time to market

Better patient access

To innovative oncology drugs

EUROPEAN MEDICINES AGENCY
SCIENCE MEDICINES HEALTH

Aug 2026: CDx Consultation Procedure Update (Rev. 4):

EMA updated CDx consultation guidance, clarifying IRIS submission, timelines, pre-submission engagement, and application requirements.

The update directly supports how Notified Bodies and CDx manufacturers should navigate the EMA CDx consultation process.

Dec 2025: MDR/IVDR Guidance for Medicinal Product-Device Combinations

Updated EU guidance clarifies requirements for medicinal product and device combinations, including CDx consultation roles for EMA and national authorities.

Mar 2025: CDx Classification Clarification (MDCG 2020-16 rev.4)

CDx are classified under IVDR Rule 3(f) and must be linked to a medicinal product identified by INN.

This classification determines the applicable conformity-assessment requirements and CDx consultation with EMA or national authorities.

Dec 2024: Guidance on CDx Consultation Procedure

EMA issued guidance on the procedural aspects of consultation between Notified Bodies and EMA for CDx.

It provides practical guidance on the submission, consultation process, timelines and interactions between Notified Bodies and EMA when assessing CDx under the IVDR.

Abb: CDx: Companion Diagnostic; ISH: In Situ Hybridization Test; IVD: In Vitro Diagnostic; IVDR: In Vitro Diagnostic Medical Devices Regulation; PMA: Premarket Approval

Deal Activity Trend: Announcements by Year

Deal Mix by Type

Most Active Companies (Buyers & Sellers)

Deal Mix by Therapeutic Area

Top Transactions by Disclosed Value

Date	Buyer	Target / Asset	Deal Type	Upfront (\$M)	Potential Value (\$M)	Indication / Technology
Oct 2017	Novartis AG	Advanced Accelerator Applications – Lutathera	Acquisition	N/A	3,900	Cancer/Radioligand Tx
Jun 2021	Veracyte Inc.	HalioDx – Immunoscore Test	Acquisition	318	318	Cancer/Lab-Based Assay
Nov 2020	Grand Pharma. Group	Telix – TLX-591 / 250 / 101	Dev & Comm. License	25	250	Cancer/ntibody
Jan 2015	Roche	Foundation Medicine – FoundationOne(Heme)	Dev & Comm. License	N/A	159	Cancer/Biomarker Dx
Jan 2024	Allogene Therapeutics	Foresight Dx (Natera) – MRD Test	R&D Only	N/A	37	Cancer/Companion Dx

Key Takeaways

- Deal activity has slowed sharply:** Transaction volume fell from 37 deals in 2021 to 16 in 2025, a ~57% decline, signaling weaker recent deal momentum
- R&D-led deals dominate:** 41% of transactions focus on early-stage development and partnering
- Oncology dominates deal activity:** Cancer accounts for 79% of deals, far ahead of Neurology at 4%, making oncology the primary transaction battleground
- Deal value disclosure is limited and highly concentrated:** Only 5.2% of deals disclose value, with \$4.7B total disclosed value, 83% driven by a single Novartis transaction

Funding Dashboard

Funding Activity & Investment Trends (2015-2025)

Total Funding Raised
\$13B
2015-2025

Funding Rounds
93
92 completed
1 terminated

Largest Single Round
\$1.65B
Roche; Convertible
Notes; Nov 2019

Companies Funded
29
Unique issuers, 2015-
2025

Funding Activity: Funding Deal Count & Amount by Year

2019 spike driven by Roche's \$5.9B multi-tranche note issuance (5 tranches, one date). 2024 marks the low point; 2025 activity rebounded to 12 deals / \$1.30B.

Funding Mix by Financing Type (\$M)

Public-market and PIPE funding drove 66.3% of total value, more than twice the value raised through Seed-Series E venture deals (24.1%)

Top Funding Rounds

Company	Round	Amount	Date	TA / Technology	Lead Investor
Roche	Convertible Notes (5 tranches)	\$5,888M	Nov 2019	Cancer / Small Molecule	Bond offering
Caris Life Sciences	Series Unspecified / Private	\$830M	May 2021	Cancer / AI-ML Diagnostics	TPG Sixth Street Partners
BioNTech SE	Common (Follow-On)	\$511.5M	Jul 2020	Cancer / Vaccine	Public offering
Caris Life Sciences	IPO	\$494M	May 2025	Cancer / AI-ML Diagnostics	Public offering
Caris Life Sciences	Debt / Loan	\$400M	Jan 2023	Cancer / AI-ML Diagnostics	OrbiMed Advisors
BioNTech SE	Series B	\$325M	Jul 2019	Cancer / Vaccine	Fidelity Investments
BioNTech SE	Series A	\$270M	Jan 2018	Cancer / Vaccine	Redmile Group

Key Takeaways

- Funding from 2015–2025 was highly concentrated: ~\$13B across 93 rounds for 29 companies
- Funding was skewed by Roche's \$1.65B convertible-notes deal, highlighting that aggregate value alone may overstate underlying sector momentum
- Public/PIPE deals drove 66.3% (~\$8.6B) of funding, far exceeding late-stage venture (~\$2.1B), highlighting the dominance of mature/public companies in capital formation
- Funding activity rebounded from a 2024 trough of 7 rounds to 12 rounds and ~\$1.30B in 2025, but reliance on large financings suggests selective investor conviction rather than broad-based recovery

Adoption Still Depends on Solving Evidence, Access & Implementation Gaps

The CDx Readiness Gap: Challenges Across the Patient Journey

Five strategic barriers limiting the development, adoption, and real-world impact of CDx

←----- CUMULATIVE DELAYS ACROSS THE CDx ECOSYSTEM ----->

Why it Matters?

Delays limit time to the right therapy

Patient can be misclassified or miss treatment opportunities

Inefficiencies increase cost and reduce system capacity

Coordinated action across the ecosystem is needed

Market Access & Reimbursement of CDx

From Regulatory Approval to Real-World Patient Access

Testing Uptake Remains Uneven

- ❖ Unequal insurance coverage continues to limit access to genomic testing
- ❖ Before CMS introduced NCD, regional MACs made genomic testing coverage decisions through LCDs, resulting in regional variations in coverage and access
- ❖ Access to testing is influenced by clinical guidelines, physician awareness, tissue availability, and certified laboratory

Coverage and Reimbursement are Critical Gatekeepers

- ❖ **"Enhancing CLIA Act 2026"** proposed that LDTs with supplemental 3rd party affirmation be treated as equivalent to US FDA-approved tests for NCDs & use as CDx
- ❖ Medicare's NCD standardized national coverage policies, reduced administrative uncertainty, and supported wider adoption of NGS testing
- ❖ Potentially extending the proposed NCD equivalence framework to recognize supplemental-affirmed LDTs as equivalent to US FDA-approved assays under LCDs

CDx in Europe: Reimbursement Gaps Limit Patient Access

- ❖ In many European countries, reimbursed cancer drug may still lack coverage for its associated CDx, limiting timely patient access to treatment
- ❖ Sequential drug approval, CDx certification, and national reimbursement decisions can extend timelines and create additional barriers to market access
- ❖ Differences in diagnostic infrastructure and reimbursement systems create disparities in CDx testing access between countries

What Drives Payer Coverage? Evidences Assessment Framework

Strategic Implications for CDx Developers

Design for Reimbursement Early

Generate payer-relevant evidence alongside regulatory development rather than after approval

Demonstrate Clinical Utility

Evidence should show how testing changes treatment decisions and improves patient outcomes

Build an Access Ecosystem

Partnerships with laboratories, healthcare systems, oncologists, and payers are essential for adoption

Plan for Evolving Indications

As CDx support additional drugs or indications, reimbursement policies and evidence requirements may need to evolve

FoundationOne CDx: Beyond US FDA Approval-Success or Stall?

Market access depends on regulatory validation, clinical utility, and payer-recognized medical necessity

Success: From US FDA Approval to Reimbursed Access

Coordinated regulatory and coverage planning translated diagnostic innovation into a defined reimbursement pathway

Friction: US FDA Approval does not Guarantee Payment

Real-world Denial Examples

New York External Appeal (2022)

A health plan denied FoundationOne CDx for NSCLC patients despite NCCN support & reimbursement; insurer cited the broad 324-gene panel as not medically appropriate. Denial upheld

Highmark (2022)

FoundationOne CDx was denied for the lung-cancer patients; payer considered NGS testing exceeding >50 genes not medical necessary. Denial upheld.

Regulatory approval establishes CDx eligibility-but payer recognized clinical utility & medical necessity determine coverage

US FDA approval opens the reimbursement pathway; sustained access depends on payer acceptance of clinical utility and medical necessity

Abb: CDx: Companion Diagnostic; CMS: Centers for Medicare & Medicaid Services; PMA: Premarket Approval

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

CDx Arena: Key Players, Platforms & Future Direction

Foundation Medicine: Advancing Precision Diagnostics

Roche owned precision oncology company combining comprehensive genomic profiling, CDx & molecular monitoring

100

NGS-based CGP + biomarker driven
treatment selection

CDx PLATFORM & POSITIONING

CDx claims are therapy specific applications within a
broader CGP information layer

- Tissue - FoundationOne CDx
- Blood - FoundationOne Liquid CDx

CURRENT CDx PORTFOLIO (APPROVED)^{representative, not exhaustive}

INDICATION	BIOMARKER	TEST/CDx	THERAPY
Breast (HR+/HER2-)	PIK3CA	F1 CDx + Liquid	Itovebi
Prostate (mCRPC)	HRR genes	F1 CDx + Liquid	Taizenna + Xtandi
NSCLC	MET exon 14	F1 CDx + Liquid	Tepmetko
Colorectal (mCRC)	BRAF V600E	F1 Liquid CDx	Braftovi + Cetuximab
NSCLC/pan tumor	ROS1, NTRK1/2/3	F1 CDx + Liquid	Rozlytrek
Pan tumor	MSI-H/ TMB	F1 CDx	Pembrolizumab

CDx MILESTONES & OUTLOOK

Completed (2025 – 2026)

- ❖ Dec 2025 – 100th approved CDx indication (US + Japan)
- ❖ May 2026 – Tepmetko CDx (NSCLC)
- ❖ Jun 2026 – Talzena + Xtandi CDx (Prostate); Itovebi CDx (Breast)
- ❖ May 2026 – FoundationOne MRD launch (monitoring, not an US FDA approved CDx)

Pipeline (not yet approved)

- ❖ BMS – Homozygous MTAP deletion CDx
- ❖ AnHeart – Taletrectinib (ROS1) CDx (Tissue & Liquid based)
- ❖ Boehringer Ingelheim – BI 9007828 (MDM2) CDx, (Biliary tract)

STRATEGIC INSIGHTS

- Scale creates a barrier: 100 approved CDx indications + tissue/liquid CGP platforms strengthen FMI's regulatory and partnership scale
- Monitoring expands the role: MRD and Pathlight extend FMI from treatment selection into longitudinal monitoring
- Biomarker diversification broadens reach: MTAP deletion and ROS1 programs expand FMI into challenging biomarker classes

Foundation One: A Multi-Biomarker CDx Powering Precision Oncology

US FDA-approved comprehensive genomic profiling assay enabling biomarker-driven treatment selection across solid tumors

FoundationOne CDx is an US FDA-approved, qualitative NGS-based *in vitro* diagnostic test for advanced cancer patients with solid tumors

Product Snapshot

	Trade Name	FoundationOne CDx (F1CDx)
	Generic Name	NGS oncology panel, somatic or germline variant detection system
	Manufacturer	Foundation Medicine
	Regulatory Pathway	FDA Premarket Approval (PMA)
	Sample Type	FFPE tumor tissue
	PMA Number	P17009
	Clinical Scope	Advanced cancer patients with solid tumors

Technology & Biomarker Coverage

*HRDsig is a professional service, not part of the US FDA-approved assay

Clinical Workflow

Clinical Value: Identifies genomic alterations that may support selection of targeted therapies such as EGFR, ALK, BRAF, BRCA1/2, PIK3CA, MET, HRR genes

US FDA Approved CDx Applications

Applications vary by biomarker & approved therapeutic product

 Multiple-biomarker platform supporting an expanding range of precision oncology therapies

Approval Timeline

Octavus Insight

FoundationOne CDx combines broad genomic coverage with an expanding portfolio of US FDA-authorized CDx applications, positioning it as a foundational comprehensive genomic profiling platform in precision oncology

Abb: CDx: Companion Diagnostic; CAN: Copy Number Alterations; HRD: Homologous Recombination Deficiency; MSI: Microsatellite Instability; NGS: Next-Generation Sequencing; NSCLC: Non-Small Cell Lung Cancer; PMA: Premarket Approval; TMB: Tumor Mutational Burden

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

Guardant360 Liquid CDx is an FDA-approved, blood-based (cfDNA) NGS CDx profiling >700 genes across 5 variant classes: SNV: Single Nucleotide Variant (SNVs), indels, rearrangements, copy-number amplifications (CNA), copy-number losses (CNL)

38

Abstracts + 1 oral presentation (with Pfizer) at ASCO 2026

Abstract #3077: pan-cancer CDx validation

New performance data validated Guardant360 Liquid CDx as a comprehensive CDx, combining genomic and epigenomic signals to deliver strong analytical sensitivity, accuracy, and specificity across clinically relevant alterations

Key Analytical Performance Data

Validation scale: >4,000 samples / ~2,000 patients across 29 cancer types, benchmarked vs. the approved Guardant360 CDx and an external ctDNA assay, per FDA IVD standards

QC pass rate: 99.1%, low sample-failure friction supports routine clinical and trial-enrollment use

Variant Class	PPA	NPA	Panel-wide LoD at minimum input
SNV	94.9%	99.86%	1.0%
Indel	96.24%	99.98%	0.9%
Rearrangement	94.64%	99.76%	0.5-1.6%
CNA	91.67%	99.97%	2.3-2.4 copies
CNL	100%	97.56%	22.7% tumor frac.
Specificity (LoB)	-	0% FPR	Healthy donor cfDNA

PPA: positive percent agreement, NPA: negative percent agreement, LoD: limit of detection, LoB: limit of blank; FPR: False Positive Rate; cfDNA: Cell-free DNA

Key Insight: Analytical validation across >4,000 samples confirms tissue-comparable sensitivity/specificity and near-zero false positives, giving Guardant a pan-cancer, multi-modality CDx platform pharma partners can leverage for both companion diagnostic labeling and rapid biomarker-driven trial enrollment

Future Outlook of CDx

CDx is evolving toward longitudinal, AI-enabled, multi-analyte testing for faster treatment decisions

Liquid Biopsy & ctDNA

From monitoring to treatment-triggering decisions: US FDA's 2026 camizestrant approval, guided by pre-progression ctDNA-detected ESR1 mutations, establishes a new precedent for longitudinal ctDNA-guided treatment switching and earlier resistance detection

AI-Enabled CDx

From fixed algorithms to adaptive CDx: US FDA's PCCP framework enables predefined pathways for modifying and validating AI algorithms, signaling a shift toward more lifecycle-managed and adaptive AI-enabled diagnostics

Tumor-Agnostic Testing

From tissue-specific to biomarker-first development: Expanding biomarker-driven therapies and basket-trial strategies across multiple tumor types are likely to accelerate the shift toward biomarker-defined development, increasing demand for pan-tumor testing and earlier CDx co-development

Decentralized Testing

From centralized labs to near-patient testing: Advances in automated, cartridge-based point-of-care molecular diagnostics are enabling faster sample-to-answer workflows, signaling a shift toward decentralized testing that could shorten turnaround times and reduce reliance on centralized laboratories

Platform/Multiplex CDx

From single-analyte assays to scalable platforms: Expansion of broad NGS-based CDx platforms across multiple biomarkers and indications is signaling a shift toward scalable, multiplex testing that could support faster biomarker expansion across drug pipelines

ABOUT COMPANY

Research & Intelligence that Proves our ROI

Competitive Intelligence & Monitoring

- Real-time CI monitoring
- Strategic early warning
- War-gaming & Simulation workshops
- Conference coverage
- Trial Optimization Strategy
- Digital Biomarker Strategy
- Competitor Promotion tracking

Portfolio & Commercial Strategy

- Opportunity Scanning
- Portfolio Strategy & Asset Prioritization
- Brand positioning
- Peak Sales Forecasting
- Digital therapeutic evaluation
- Innovation pipeline screening

Business Development & Licensing

- Target identification and validation
- Retrospective deal analysis
- Synergy assessment
- M&A due diligence
- Digital health and innovation advisory

Market Access & Evidence

- Payer landscape mapping
- Value dossier support
- RWE strategy design
- Pricing and reimbursement roadmaps
- RWE Analysis
- Medical Insights Research
- KOL identification and mapping
- KOL Engagement strategy

Medical Affairs & Analytics

- HCP & Patient insights
- Field force analysis
- Forecasting
- Integrated data analytics
- Patient journey mapping & analytics
- Patient Advocacy mapping
- Content Strategy
- Digital Sentiment analysis

Capabilities are configured to fit the decision, asset stage and timeline.
